The amendment filed 9/3/03 is acknowledged. Claims 47-58 are being considered on the merits.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (c) prior art under 35 U.S.C. 103(a).

Claims 47-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Allen taken with Winkler and Cantor *et al.* for the reasons as stated in the last Office action and the further reasons below.

### ***Response to Arguments***

Applicant's arguments have been fully considered but they are not deemed to be persuasive.

In response to Applicant's argument that none of the cited references alone or in combination suggests the preferred halide sources and ammonium salts recited in the dependent claims. Also applicant alleges that the references fail to suggest that the combination of a haloperoxidase and a salt of  $\text{NH}_4^+$  would result in an increased antibacterial activity. However, the touted surprising and unexpected results pertain to Example 4 and not to Table 1, at page 14 of the Specification, for example, wherein the effects of KI and  $\text{INH}_4$  are not significantly different at 0.5 mM concentration. In Example 4 a specific haloperoxidase is used in conjunction with ethanolamine. Only in claim 56 is the halide source and the salt of ammonium the same.

Thus, the touted invention is dependent on the specific ammonium salt used, as well as its concentration and does not produce the touted unexpected results throughout the broad ranges as claim designated. Inasmuch as at least the Winkler reference discloses the use of ammonium salts in the context of a haloperoxidase (See, e.g., col. 5, in particular line 53), applicant's arguments fail to persuade. Therefore the rejection is deemed proper and it is adhered to.

No claim is allowed.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
